

LIKRATOX

Toxin binder

- ▶ Binds and fixes toxins
- ▶ Higher detoxification rate
- ▶ Reduces oxidative stress
- ▶ Strengthens the immune system

successful feeding

LIKRA
Tierernährung

Toxin binder for pigs, cattle & poultry

Effects of mycotoxins:

- swelling of vulva and teats
- fertility problems and infertility
- ovarian cysts
- agalactia
- vomit and indigestion
- liver damage
- decreased semen quality
- kidney dysfunction
- decreased appetite and performance
- diarrhoea
- supports cancer

What is behind LIKRATOX?

LIKRATOX is a combination of special absorbents (Bentonite, Clinoptilolite, cell wall products), together with antioxidant acting substances, which bind toxins and inhibit their damaging effects. The detoxification rate of the liver increases and the immune system gets strength.

LIKRATOX

Effectiveness of LIKRATOX

Yeast strains activate enzymes converting individual mycotoxins to harmless secondary metabolites.

Beginning in the feed production the spore formation is suppressed through the binding of available water. Due to their large surface area and their absorption power clay minerals have the ability to eliminate mycotoxins.

The Bentonite, which is used, has an EU-admission for binding aflatoxin (absorptions rate > 90 %!).

LIKRATOX supports and strengthens liver functions and speeds up cell renewal. The antioxidant acting substances reduce the oxidative stress, inhibit thus free radicals and increase the ability of the animal to detoxify itself.

Vitamins and trace elements are obtained through the selective binding of mycotoxins in LIKRATOX.

Usage of LIKRATOX (depending on the pressure)

Pigs & poultry: 2-3 kg/ t feed, 5 kg/t at high load

Dairy cows: 100 g/animal and day, 200 g/animal at high load

Packaging: 20 kg polyethylene bag, free from dust under vacuum packed

LIKRATOX

Your benefit of LIKRATOX

- better fertility
- noticeable oestrus symptoms
- high milk yield
- higher feed intake
- improve fattening performance
